Marks: 80

[5]

[10]

(R-2019 ( Scheme)

6/6/2023

Time: 3 Hours

Note: 1. Question 1 is compulsory

+ 1 mod 16.

**Q4** a)

- 2. Answer any three out of the remaining five questions.
- 3. Assume any suitable data wherever required and justify the same.
- **O1** a)
  - Distinguish between Name node and Data node. b)
  - List and explain the core business drivers behind the NoSQL movement. [5] Mention four characteristics of big data. Elaborate these characteristics with c) [5] respect to social media websites.
  - List and explain the different issues and challenges in data stream query d) [5] processing.
- What is a key-value store? What are the benefits of using a key-value store? O2 a) [10]Write a map reduce pseudo code to multiply two matrices. Apply map reduce working to perform following matrix multiplication.
  - Suppose the stream is  $S = \{2, 1, 6, 1, 5, 9, 2, 3, 5\}$ . Let hash functions h(x) = ax + b[10]b mod 16 for some a and b, treat result as a 4-bit binary integer. Show how the Flajolet- Martin algorithm will estimate the number of distinct elements, h(x) = 4x
    - Consider the following data frame given below:

		ita namo g	, I V CII, UCIO M	
course	id	class	marks	
1	11	1	13 <sup>2</sup> 56	
2	12,5	2	ž 75 🔑	
3	13	1 (	48	
4	14	2	69	
5	15	1	84	
6	16	2	€ 53	

- Create a subset of course less than 3 by using [] brackets and demonstrate i. the output.
- Create a subset where the course column is less than 3 or the class equals to 2 by using subset () function and demonstrate the output.
- Explain natural join and grouping and aggregation relational algebraic operation using MapReduce. [10]b)
- With a neat sketch, explain the architecture of the data-stream management [10]

## 30013 Page 1 of 2

## Paper / Subject Code: 42172 / BIG DATA ANALYTICS

Q5 a) Determine communities for the given social network graph using Girvan-Newman algorithm.

b) List and discuss various types of data structures in R.

[10]

Q6 a) i. The following table shows the number of units of different products sold on different days:

[10]

Product Mond		nday	ay Tuesday		Wednesday		Thursda	Friday
		· ·				27,	y	
Bread	12	2 (	3		5	3	110	9
Milk	21		27	10. (85	18		20	15
Cola Cans	10		1		330		6	12
Chocolate	6.		7		4	85.	13	12
bars						, ,	10%	
Detergent	5	3	8	. 04	12	£ .	20	23

Create five sample numeric vectors from this data.

- ii. Name and explain the operators used to form data subsets in R.
- b) Define collaborative filtering. Using an example of an e-commerce site like flipkart or amazon describe how it can be used to provide recommendation to users.

[10]
